

# Preregulator – source 300 V

PRG-300-DC

## Description

Preregulator is used for excitation of pulse microwave generator and pulse high voltage generator. Preregulator is placed in 19-inch rack - height 4U (175mm).

## Technical data:

- |                                                  |                     |
|--------------------------------------------------|---------------------|
| • power supply                                   | 230V/ 50Hz          |
| • power                                          | 1000W               |
| • voltage                                        | 0 až 1kV dc         |
| • max. current                                   | 1A                  |
| • type of protection                             | IP 20               |
| • module dimensions W x H x D                    | 427 x 175 x 460 mm  |
| • external conditions according to ČSN 33 2000-3 | standart workplaces |
| • operating temperature range                    | 0 až +40°C          |
| • control                                        | local manual        |

## Optional accessories:

- |           |                           |
|-----------|---------------------------|
| • control | external (UART, Ethernet) |
|-----------|---------------------------|
